| Pos. | Parts | Materials | Nomenclature | Matériaux | Nomenclatura | Materiale |
|-------|-------------------------------|------------------------------------|---------------------------------|-------------------------------|------------------------------|--------------------------------------|
| 1 | Delivery body | Cast iron | Corps de refoulement | Fonte grise | Corpo mandata | Ghisa grigia |
| 2 | Impeller | Cast iron | Roue | Fonte grise | Girante | Ghisa grigia |
| 3 | Ring impeller seat | Steel/Rubber | Bague d'usure | Acier/Caoutchouc | Anello sede girante | Acciaio/Gomma |
| 5 | Mechanical seal on pump side | silicon carbide/ceramic | Garniture mécanique côté pompe | carbure de silicium/céramique | Tenuta meccanica lato pompa | Carburo di silicio/ceramica |
| 6 | Support bearing | Nodular cast iron | Support de roulement | Fonte sphéroïdale | Supporto cuscinetto | Ghisa sferoidale |
| 7 | Flange bearing | Cast iron | Bride roulement | Fonte grise | Flangia cuscinetto | Ghisa grigia |
| 8 | Oil box | Cast iron | Chambre à huile | Fonte grise | Scatola olio | Ghisa grigia |
| 9 | Cable clamp | Cast iron | Presse-étoupe | Fonte grise | Pressacavo | Ghisa grigia |
| 10 | Motor casing | Cast iron | Enveloppe du moteur | Fonte grise | Carcassa motore | Ghisa grigia |
| 11 | Stator | Electrical steel | Stator | Tôle magnétique | Statore | Lamierino magnetico |
| 12 | Complete shaft with rotor | Stainless steel/ Magnetic steel | Arbre avec rotor | Acier inox/Tôle magnétique | Albero completo di rotore | Acciaio inox/ Lamierino magnetico |
| 14-15 | Conductivity probe | - | Sondes de conductivité | - | Sonda di conduttività | - |
| 16 | Mechanical seal on motor side | Ceramic/graphite | Garniture mécanique côté moteur | Céramique/graphite | Tenuta meccanica lato motore | Ceramica/grafite |
| 18 | Elastic ring | Steel | Circlip | Acier | Anello elastico | Acciaio |
| 19 | Handle | Stainless steel | Poignée | Acier inox | Maniglia | Acciaio inox |
| 20 | Round power cable | - | Câble rond d'alimentation | - | Cavo tondo di alimentazione | - |

* For explosion-proof versions (X);
On demand for (N) versions.
(Conductivity probe in the motor casing)
Screws and nuts in stainless steel.

* Pour version antidéflagrantes (X);
Sur demande pour les versions (N).
(Sonde de conductivité dans l'enveloppe du moteur)
Vis et écrous en acier inox

* Per versioni antideflagranti (X);
su richiesta per versioni (N).
(Sonda di conduttività nella carcassa motore)
Viti e dadi in acciaio inox

Torque-flow recessed impeller
Roue vortex
Girante aperta arretrata

*N = Standard version

*X = Explosion-proof version

P₁ = Power absorbed by the motor

P₂ = Power rated by the motor

I_N = Rated current

I_S = Starting current

- The electric pumps are suitable for S1 continuous service with submersed motor and for S3 intermittent service (see relative degrees of intermittence in the table) with non-submersed motor.

S3 service stands for intermittent service consisting of 10 minute equal cycles of which the previous table indicates the minutes of the cycle during which the motor may operate (eg. : S3 = 25% operation consists of a repetitive sequence of 2,5 minutes operation and 7,5 minutes at a standstill). See standard CEI EN 60034-1

- The electric motors are produced in the following voltage ratings: 400 V ± 10% standard; 230 V ± 10% on request.

Other voltages on request.

*N = Version standard

*X = Version antidéflagrante

P₁ = Puissance absorbée par le moteur

P₂ = Puissance restituée par le moteur

I_N = Intensité nominale

I_S = Intensité au démarrage

- L'électropompe est apte à fonctionner en service continu S1 avec le moteur complètement immergé, en service intermittent S3 moteur non immergé (se reporter aux valeurs d'intermittence mentionnées dans le tableau).

Le service S3 indique un fonctionnement intermittent par cycles identiques de 10 minutes. Le tableau ci-dessus indique le temps de marche du moteur en minutes pour 1 cycle de 10 minutes (Ex. : S3 = 25% chaque cycle sera composé de 2,5 minutes de marche et de 7,5 minutes d'arrêt). Voir norme CEI EN 60034-1.

- Les moteurs électriques prévus doivent être alimentés aux tensions nominales suivantes: 400 V ± 10% standard; 230 V ± 10% sur demande.

Tensions différentes sur demande.

*N = Versione standard

*X = Versione antideflagrante

P₁ = Potenza assorbita motore

P₂ = Potenza resa dal motore

I_N = Corrente nominale

I_S = Corrente di avviamento

- Le elettropompe sono atte a funzionare in servizio continuo S1 con motore immerso, in servizio intermittente S3 con motore non immerso (vedi relativi gradi di intermittenza nella tabella).

Il servizio S3 sta ad indicare un funzionamento intermittente composto da cicli tutti uguali di 10 minuti di cui si indicano i minuti del ciclo in cui il motore può funzionare (Es. : S3 = 25% il funzionamento è composto da una sequenza ripetitiva di 2,5 minuti di funzionamento e di 7,5 minuti di sosta). Vedi norma CEI EN 60034-1.

- I motori elettrici sono previsti per essere alimentati alle seguenti tensioni nominali di rete: 400 V ± 10% standard; 230 V ± 10% a richiesta.

Tensioni diverse su richiesta.

*N = Standard version

*X = Explosion-proof version

P₁ = Power absorbed by the motor

P₂ = Power rated by the motor

I_N = Rated current

I_s = Starting current

- The electric pumps are suitable for S1 continuous service with submersed motor and for S3 intermittent service (see relative degrees of intermittence in the table) with non-submersed motor.

S3 service stands for intermittent service consisting of 10 minute equal cycles of which the previous table indicates the minutes of the cycle during which the motor may operate (eg. : S3 = 25%. operation consists of a repetitive sequence of 2,5 minutes operation and 7,5 minutes at a standstill). See standard CEI EN 60034-1

- The electric motors are produced in the following voltage ratings: 400 V ± 10% standard; 230 V ± 10% on request.

Other voltages on request.

*N = Version standard

*X = Version antidéflagrante

P₁ = Puissance absorbée par le moteur

P₂ = Puissance restituée par le moteur

I_N = Intensité nominale

I_s = Intensité au démarrage

- L'électropompe est apte à fonctionner en service continu S1 avec le moteur complètement immergé, en service intermittent S3 moteur non immergé (se reporter aux valeurs d'intermittence mentionnées dans le tableau).

Le service S3 indique un fonctionnement intermittent par cycles identiques de 10 minutes. Le tableau ci-dessus indique le temps de marche du moteur en minutes pour 1 cycle de 10 minutes (Ex. : S3 = 25% chaque cycle sera composé de 2,5 minutes de marche et de 7,5 minutes d'arrêt). Voir norme CEI EN 60034-1.

- Les moteurs électriques prévus doivent être alimentés aux tensions nominales suivantes: 400 V ± 10% standard; 230 V ± 10% sur demande.

Tensions différentes sur demande.

*N = Versione standard

*X = Versione antideflagrante

P₁ = Potenza assorbita motore

P₂ = Potenza resa dal motore

I_N = Corrente nominale

I_s = Corrente di avviamento

- Le elettropompe sono atte a funzionare in servizio continuo S1 con motore immerso, in servizio intermittente S3 con motore non immerso (vedi relativi gradi di intermittenza nella tabella).

Il servizio S3 sta ad indicare un funzionamento intermittente composto da cicli tutti uguali di 10 minuti di cui si indicano i minuti del ciclo in cui il motore può funzionare (Es. : S3 = 25% il funzionamento è composto da una sequenza ripetitiva di 2,5 minuti di funzionamento e di 7,5 minuti di sosta). Vedi norma CEI EN 60034-1.

- I motori elettrici sono previsti per essere alimentati alle seguenti tensioni nominali di rete: 400 V ± 10% standard; 230 V ± 10% a richiesta.

Tensioni diverse su richiesta.

*N = Standard version

P₁ = Power absorbed by the motor

P₂ = Power rated by the motor

I_N = Rated current

I_s = Starting current

- The electric pumps are suitable for S1 continuous service with submersed motor and for S3 intermittent service (see relative degrees of intermittence in the table) with non-submersed motor.

S3 service stands for intermittent service consisting of 10 minute equal cycles of which the previous table indicates the minutes of the cycle during which the motor may operate (eg. : S3 = 25% operation consists of a repetitive sequence of 2,5 minutes operation and 7,5 minutes at a standstill). See standard CEI EN 60034-1

- The electric motors are produced in the following voltage ratings: 400 V ± 10% standard; 230 V ± 10% on request.

Other voltages on request.

*N = Version standard

P₁ = Puissance absorbée par le moteur

P₂ = Puissance restituée par le moteur

I_N = Intensité nominale

I_s = Intensité au démarrage

- L'électropompe est apte à fonctionner en service continu S1 avec le moteur complètement immergé, en service intermittent S3 moteur non immergé (se reporter aux valeurs d'intermittence mentionnées dans le tableau).

Le service S3 indique un fonctionnement intermittent par cycles identiques de 10 minutes. Le tableau ci-dessus indique le temps de marche du moteur en minutes pour 1 cycle de 10 minutes (Ex. : S3 = 25% chaque cycle sera composé de 2,5 minutes de marche et de 7,5 minutes d'arrêt). Voir norme CEI EN 60034-1.

- Les moteurs électriques prévus doivent être alimentés aux tensions nominales suivantes: 400 V ± 10% standard; 230 V ± 10% sur demande.

Tensions différentes sur demande.

*N = Versione standard

P₁ = Potenza assorbita motore

P₂ = Potenza resa dal motore

I_N = Corrente nominale

I_s = Corrente di avviamento

- Le elettropompe sono atte a funzionare in servizio continuo S1 con motore immerso, in servizio intermittente S3 con motore non immerso (vedi relativi gradi di intermittenza nella tabella).

Il servizio S3 sta ad indicare un funzionamento intermittente composto da cicli tutti uguali di 10 minuti di cui si indicano i minuti del ciclo in cui il motore può funzionare (Es. : S3 = 25% il funzionamento è composto da una sequenza ripetitiva di 2,5 minuti di funzionamento e di 7,5 minuti di sosta). Vedi norma CEI EN 60034-1.

- I motori elettrici sono previsti per essere alimentati alle seguenti tensioni nominali di rete: 400 V ± 10% standard; 230 V ± 10% a richiesta.

Tensioni diverse su richiesta.

*X = Explosion-proof version

P₁ = Power absorbed by the motor

P₂ = Power rated by the motor

I_N = Rated current

I_S = Starting current

- The electric pumps are suitable for S1 continuous service with submersed motor and for S3 intermittent service (see relative degrees of intermittence in the table) with non-submersed motor.

S3 service stands for intermittent service consisting of 10 minute equal cycles of which the previous table indicates the minutes of the cycle during which the motor may operate (eg. : S3 = 25% operation consists of a repetitive sequence of 2,5 minutes operation and 7,5 minutes at a standstill). See standard CEI EN 60034-1

- The electric motors are produced in the following voltage ratings: 400 V ± 10% standard; 230 V ± 10% on request.

Other voltages on request.

*X = Version antidéflagrante

P₁ = Puissance absorbée par le moteur

P₂ = Puissance restituée par le moteur

I_N = Intensité nominale

I_S = Intensité au démarrage

- L'électropompe est apte à fonctionner en service continu S1 avec le moteur complètement immergé, en service intermittent S3 moteur non immergé (se reporter aux valeurs d'intermittence mentionnées dans le tableau).

Le service S3 indique un fonctionnement intermittent par cycles identiques de 10 minutes. Le tableau ci-dessus indique le temps de marche du moteur en minutes pour 1 cycle de 10 minutes (Ex. : S3 = 25% chaque cycle sera composé de 2,5 minutes de marche et de 7,5 minutes d'arrêt). Voir norme CEI EN 60034-1.

- Les moteurs électriques prévus doivent être alimentés aux tensions nominales suivantes: 400 V ± 10% standard; 230 V ± 10% sur demande.

Tensions différentes sur demande.

*X = Versione antidéflagrante

P₁ = Potenza assorbita motore

P₂ = Potenza resa dal motore

I_N = Corrente nominale

I_S = Corrente di avviamento

- Le elettropompe sono atte a funzionare in servizio continuo S1 con motore immerso, in servizio intermittente S3 con motore non immerso (vedi relativi gradi di intermittenza nella tabella).

Il servizio S3 sta ad indicare un funzionamento intermittente composto da cicli tutti uguali di 10 minuti di cui si indicano i minuti del ciclo in cui il motore può funzionare (Es. : S3 = 25% il funzionamento è composto da una sequenza ripetitiva di 2,5 minuti di funzionamento e di 7,5 minuti di sosta). Vedi norma CEI EN 60034-1.

- I motori elettrici sono previsti per essere alimentati alle seguenti tensioni nominali di rete: 400 V ± 10% standard; 230 V ± 10% a richiesta.

Tensioni diverse su richiesta.

*N = Standard version

*X = Explosion-proof version

P₁ = Power absorbed by the motor

P₂ = Power rated by the motor

I_N = Rated current

I_S = Starting current

- The electric pumps are suitable for S1 continuous service with submersed motor and for S3 intermittent service (see relative degrees of intermittence in the table) with non-submersed motor.

S3 service stands for intermittent service consisting of 10 minute equal cycles of which the previous table indicates the minutes of the cycle during which the motor may operate (eg. : S3 = 25%. operation consists of a repetitive sequence of 2,5 minutes operation and 7,5 minutes at a standstill). See standard CEI EN 60034-1

- The electric motors are produced in the following voltage ratings: 400 V ± 10% standard; 230 V ± 10% on request.

Other voltages on request.

*N = Version standard

*X = Version antidéflagrante

P₁ = Puissance absorbée par le moteur

P₂ = Puissance restituée par le moteur

I_N = Intensité nominale

I_S = Intensité au démarrage

- L'électropompe est apte à fonctionner en service continu S1 avec le moteur complètement immergé, en service intermittent S3 moteur non immergé (se reporter aux valeurs d'intermittence mentionnées dans le tableau).

Le service S3 indique un fonctionnement intermittent par cycles identiques de 10 minutes. Le tableau ci-dessus indique le temps de marche du moteur en minutes pour 1 cycle de 10 minutes (Ex. : S3 = 25% chaque cycle sera composé de 2,5 minutes de marche et de 7,5 minutes d'arrêt). Voir norme CEI EN 60034-1.

- Les moteurs électriques prévus doivent être alimentés aux tensions nominales suivantes: 400 V ± 10% standard; 230 V ± 10% sur demande.

Tensions différentes sur demande.

*N = Versione standard

*X = Versione antideflagrante

P₁ = Potenza assorbita motore

P₂ = Potenza resa dal motore

I_N = Corrente nominale

I_S = Corrente di avviamento

- Le elettropompe sono atte a funzionare in servizio continuo S1 con motore immerso, in servizio intermittente S3 con motore non immerso (vedi relativi gradi di intermittenza nella tabella).

Il servizio S3 sta ad indicare un funzionamento intermittente composto da cicli tutti uguali di 10 minuti di cui si indicano i minuti del ciclo in cui il motore può funzionare (Es. : S3 = 25% il funzionamento è composto da una sequenza ripetitiva di 2,5 minuti di funzionamento e di 7,5 minuti di sosta). Vedi norma CEI EN 60034-1.

- I motori elettrici sono previsti per essere alimentati alle seguenti tensioni nominali di rete: 400 V ± 10% standard; 230 V ± 10% a richiesta.

Tensioni diverse su richiesta.

DSN, DS, DN decontactors

Decontactors allow electric pumps to be easily disconnected from the power source when maintenance work is required.

The range of decontactors for the K+ series provides a complete solution for motors with direct or star/delta 400V 50 Hz starting systems (special voltage ratings are available on request).

These electrical devices have contacts for power transmission and for auxiliary devices (thermal probes, conductivity probes and sensors in general).

The decontactors feature metal braid technology and silver-nickel balls. This achieves an excellent quality contact over time and allows a built-in cutout to be obtained.

Protection degree:

DSN series IP 67

DN, DS, DS7 series IP 54

They are approved products that comply with UL, CSA, VDE standards.

Built in accordance with standards CEI 60309-1 and CEI 60947-3.

The following products are available:

- pin decontactors
- wall-mounted socket decontactors
- wiring on the cable of the electric K+ pump (on request)

DSN, DS, DN décontacteurs

Les décontacteurs garantissent une activité simple, pendant l'entretien, pour mettre hors tension l'électropompe.

La gamme de décontacteurs destinés à la série K+ représente une solution complète pour moteurs à démarrage direct ou étoile/triangle à 400V 50Hz (tensions spéciales sur demande).

Ces dispositifs électriques ont des contacts pour la transmission de puissance et pour les auxiliaires (sondes thermiques, sonde de conductivité et capteurs en général).

Ils utilisent la technologie du contact à tresse métallique avec contact en bout à pastilles en argent-nickel. C'est une garantie de qualité supérieure du contact dans le temps avec possibilité de bénéficier d'un dispositif d'interruption incorporé.

Indice de protection:

série DSN IP67

série DN, DS, DS7 IP54

Produits agréés par les réglementations UL, CSA, VDE.

Réalisés conformément à la norme CEI 60309-1 et CEI 60947-3. Versions disponibles :

- décontacteurs mâles
- décontacteurs femelles mural
- montage sur câble de l'électropompe K+ (sur demande).

DSN, DS, DN decontattori

I decontattori consentono una semplice operazione per scollegare l'elettropompa dall'alimentazione.

La gamma di decontattori per la serie K+ costituisce una soluzione completa per motori in avviamento diretto o stella/triangolo a 400V 50Hz (tensioni speciali su richiesta).

Questi dispositivi elettrici hanno contatti per trasmissione di potenza e per ausiliari (sonde termiche, sondino di conduttività e sensori in genere).

Utilizzano la tecnologia del contatto a treccia metallica con palline di testa in argento-nichel. Ciò garantisce una qualità eccellente di contatto nel tempo e dà la possibilità di avere un dispositivo d'interruzione incorporato.

Grado di protezione:

serie DS IP 67

serie DN, DS, DSN IP 54

Sono prodotti approvati dalle normative UL, CSA, VDE e sono realizzati secondo la norma CEI 60309-1 e CEI 60947-3.

Sono disponibili:

- decontattori maschi
- decontattori femmine a parete
- cablaggio sul cavo dell'elettropompa K+ (su richiesta).
